

Registry

The Alabama Department of Public Health's (ADPH) Immunization Division is the owner and manager for the **Imm**unization **P**atient **R**esources with **I**ntegrated **T**echnology (ImmPRINT). ImmPRINT is Alabama's statewide electronic immunization registry. The purpose of ImmPRINT is to be a reliable source for providing an accurate summary of vaccine histories for all Alabama patients.

The registry is used to record all vaccine administered and evaluate trends by collecting and organizing immunization data throughout Alabama. Equipped with this data, ADPH Immunization staff can identify vaccination rates, practices, and disparities per county, health specialty, and/or patient populations. Public health personnel and officials can then better collaborate with health care providers, institutions, and the public to educate and improve vaccination rates and decrease the occurrence of vaccine preventable diseases. Ultimately, ImmPRINT is a tool used to serve and respond to the vaccination health needs of Alabamians.
